1. About

Loot Arena is a gamified, patent-pending auction platform where members (also known as POP miners or miners) bid for non-fungible tokens (NFTs) using bid units (BUN), a token of limited supply. In the process, miners receive Loot Tickets (LTT) based on a ratio of how many BUN they must bid to obtain one LTT (also known as a mining ratio).

Access to Loot Arena is by invitation only. Members can buy and resell NFTs in auctions. All NFTs in Loot Arena are part of a themed set of 5 and collecting NFTs unlocks rewards. Creators (in partnership with curators) showcase their creation in the auction arena. They receive miners' attention and the proceeds from the auctions. Proceeds can also be directed to charitable or good causes.

LTT is a cryptocurrency that is redeemable for products and services and can be sent by miners off-ecosystem (functionality coming soon).

- 1.1 This booklet is a how-to guide to the rules and navigation of the Loot Arena application. For more in-depth details regarding how the site works, consult the Proof of Play white paper, LTT Tokenomics, and the Loot NFT World white paper.

2. The ground rules

- 2.1 Loot Arena is by invitation only. To be invited, a miner must pay an invite fee to whitelist their invitee's email address, or an invitee must follow a referral URL to Loot Arena. Those following a URL to sign up must pay the joining fee.
- 2.2 Miners use Bid Units (BUN) to bid in battle-bidding auctions for NFTs. BUN are spent (not returnable) in auctions and convert to Loot Tickets (LTT) based on a ratio (i.e., how many BUN a miner must spend in an auction to receive one LTT - this is called *Mining Ratio*). Miners can use LTT to redeem products and services and send them off-ecosystem to a cryptocurrency wallet (functionality coming soon).
 - 2.6 Miners must buy in-world credits (or Credits) to buy BUN or LTT. One Credit is fixed at 1 USDC ERC20, and BUN are purchased in packs of 25 for 5 Credits (or ~ 0.20 USDC ERC20 each). LTT can be bought with Credits from a marketplace, where miners set the sales price for their LTT. Credits are also used to redeem for other services. (functionality coming soon)
- 2.3 The current mining ratios are 13 BUN for 1 LTT, 17 for 1, 21 for 1, 27 for 1, 34 for 1, and 42 for 1. LTT are issued per auction and only if the mining ratios are met. E.g., bidding 27 BUN at a 13 for 1 ratio in an auction mines 2 LTT, and bidding 10 BUN in one auction and 17 BUN in another at a 13 for 1 ratio, mines 1 LTT.
- 2.4 Battle-bidding auctions are gamified time-based auctions where miners bid one BUN at a time to win an NFT. The last miner to bid before the timer expires wins the NFT. A bid received in the last 15 seconds of an auction resets the timer back 15 seconds. Miners can use a bid bot to bid automatically.
- 2.5 All NFTs auctioned are unique and form part of a themed collection or set. Collecting NFTs can grant a miner a lower mining ratio (e.g., a miner on a 42 for 1 mining ratio that collects 3 out of 5 NFTs in a set moves up to 34 for 1 mining ratio) and other rewards.
 - 2.7 All BUN spent in Loot Arena are sent to a time-locked wallet, called the Oven. The Oven redistributes BUN it collects every Sunday. Ten percent (10%) rewards miners for participating in auctions, and 90% are allocated for resale back to miners. Note that BUN are only used in battle-bidding auctions.
 - 2.8 No miner can have more than 50,000 BUN at any one time in their account. Any overflow is sent to the Oven.
 - 2.9 Joining an auction

There are two types of auction joining processes. The first is for *first-listed* (i.e., new to the platform) NFTs, the second is *reserve-based* auctions (i.e., either resale or first-listing reserve auctions).

The ground rules

In first-listed auctions, miners must pay a joining fee to have a seat to bid at the auction. Once the fee is paid, they must choose an amount of BUN to allocate to that auction. This amount is escrowed from their account; bids used in auctions are debited from that allocated amount. The escrow balance can be cleared (and returned) back to the miners' account, who must re-allocate to re-join the auction.

In NFT reserve-based auctions, miners must escrow a joining fee which is a portion of the reserve price. E.g., an auction may have a reserve of 100,000 BUN with a minimum of 100 miners required to proceed. In this event, each miner escrows 1,000 BUN each. Once, the reserve is met, the auction is locked to new miners.

Miners can clear their escrow back to their wallets at any time before the auction goes live. Escrows are also returned to miners' wallets if the owner of the NFT cancels the auction before the reserve is met.

2.9.1 Joining Fee For First-Listed Auctions

(i) Miners must pay a 5 BUN joining fee to have a seat to bid. Live bidding occurs in the auction arena (first-listings), and miners bid in the battle pit. Each auction is time-limited, and 30 minutes before the initial end time, the fee to join doubles.

(ii) Miners can only bid up to their auction cap (BUN amount they can bid in auctions). Some auctions allow miners to raise their cap once only by paying the prescribed LTT fee before their initial cap is entirely consumed, and others are hard capped (i.e., no cap raises allowed).

(iii) For miners that join an auction at or after 30 minutes of the start of battle-bidding (i.e., when or after the joining fee doubles), their auction cap is reduced by the amount of fees they paid to join the auction. E.g, John joins pays 10 BUN to join a hard cap 500 BUN auction. He can only bid up to 490 BUN (500 less 10).

(iv) The auction is locked when the fee to join exceeds the auction cap or when miners have bid their entire cap for an auction.

(v) We provide data in radical transparency to all miners, such as the number of miners in an auction, the total cap for the auctions being the sum of all caps of all miners in auction, and more. A penalty box lists miners that are spam bidding (multiple bids in a row), and those that bid in the last 3 seconds of an auction. The penalty box shows the user name of those that broke the above rules, their allocated balance, hard cap balance and whether they raised their cap (for applicable auctions).

(vi) Bid bot limits (that is, how many time a miner can use the bid bot) may also be imposed from time to time.

The ground rules

2.10 Resales and Reserve-based Auctions

Reserve-based auctions must meet the reserve price to proceed to battle bidding. There are two types of reserve-based auctions: first-listings, reserve-based auctions and resales.

For resales:

(i) Miners that have won NFTs on auction can re-list them. They must pay a fee in LTT for each re-list unless they have a "Free NFT-Relist" badge. Miners can pay LTT for their auctions to be more visible (i.e., displayed higher up the page).

(ii) Miners must specify a reserve price to be met before the battle bidding auction starts. The reserve price cannot exceed the last amount it received (in BUN) at its last auction. They must also specify a minimum number of seats they want at the auction table (a minimum number of miners are required). The reserve price divided by the minimum number of seats equals the joining fee to participate in the NFT resale. Miners cannot specify a reserve and minimum seat where the joining fee exceeds 50,000 BUN per miner.

(iii) Re-listed NFTs wait in the upcoming section for miners to meet the reserve price before proceeding to the arena. Once the reserve is met, miners that join that auction are notified via email, and the auction

starts within 24 hours. After that, members engage in the same battle bidding style as a first-listed NFT.

(iv) A miner who joins a re-listing auction by paying the escrow fee can immediately allocate an amount to bid at that auction and set a bid bot.

(v) We may impose bidding caps as follows for bids (excluding the joining fee): (1) a bid-bot limit, and (2) a maximum amount that miners can bid per auction (an LTT fee can be paid to raise the cap limit). Caps may apply and or vary.

(vi) Joining fees for reserve-based auctions count towards LTT mining.

For first-time reserve-based auctions:

(i) First-time reserve-based auctions are reserved for known brands; their NFTs go on auction in the stars arena (only 8 such auctions can be held concurrently). Curators list these NFTs, set the reserve price and the number of seats to be met for the auction to proceed.

(ii) Once the reserve is met, miners that join that auction are notified via email, and the auction starts within 24 hours. After that, members engage in the same battle bidding style as a first-listed NFT.

(iii) A miner who joins a re-listing by paying the escrow fee can immediately allocate an amount to bid at that auction and set a bid bot.

The ground rules

(iv) We may impose bidding caps as follows for bids (excluding the joining fee):

(1) a bid-bot limit, and (2) a maximum amount that miners can bid per auction (an LTT fee can be paid to raise the cap limit). Caps may apply and or vary.

(v) Joining fees for reserve-based auctions count towards LTT mining.

2.11 BUN received at auction converts to USDC ERC20 at an Effective Bid Value (or EBV). The EBV is reduced from the equivalent of 0.20 USDC ERC20 per BUN to take into account BUN given for free as rewards and royalties to ecosystem participants.

2.12 BUN and Oven

(a) BUN are trapped in each auction and only sent to the Oven at the end of the auction. BUN are also sent to the Oven for any account overflow (i.e., amount received above 50,000 BUN to an account). Further, Oven rewards cannot be distributed to miners with decimal places (i.e., BUN must always be in whole numbers). In that case, the Oven may have small residual amounts following each weekly distribution.

(b) Oven rewards (10% of the Oven) to miners are distributed based on members' participation in auctions as follows:

(i) Five percent of the total BUN is distributed to a miner based on that miner's bids to date to all other miners' bids from the first auction on Loot Arena. This pro-rata share is multiplied by 5% of the Oven and distributed to miners on Sunday at 00:00 UTC.

(ii) Five percent of the total BUN is distributed to a miner based on that miner's bids over the past seven days to all other miners' bids in the same period. This pro-rata share is multiplied by 5% of the Oven and distributed to miners on Sunday at 00:00 UTC.

(iii) Oven rewards calculation is done 24 hours before distribution.

(iv) At the end of each auction BUN are sent to the Oven and, at the same time, LTT are issued to each miner based on their mining ratio.

At that time, that sold NFT is added to a chain of prior sold NFTs. For more on this, consult the proof of play protocol.

3.0 The Rules of The Game

3.1 Much like all blockchain mining protocols, LTT mining is competitive and may require miners to learn about rules and strategies. It can also be time-consuming, and therefore it is not for everyone. If that is the case, people can buy LTT directly from miners in the Loot NFT marketplace as a shortcut if LTT is of value to them.

The ground rules

3.2 The Basics of The Game

The Proof of Play Protocol is like a card game, but instead of cards, they are NFTs. The game's object is to win NFTs and mine at the lowest ratio to produce as many LTT as possible. The rules are as follows:

(a) the last miner to bid at a time-based auction before the timer expires wins an NFT that they can resell back in Loot Arena for USDC ERC20. A bid received in the last 15 seconds resets the timer back 15 seconds. Miners bid one BUN at a time, which is spent (not refundable).

(b) BUN are limited in supply to 500,000,000. Since all auctions trap BUN while in progress, their circulating supply diminishes. This means that auctions must eventually conclude and cannot last forever.

(c) All miners' accounts are capped at 50,000 BUN at any one time. Any rewards received by an account over that cap are directed to the Oven. Other caps on the maximum amount that can be bid at auctions or bid-bot limits may be imposed from time to time.

(d) There are 5 NFTs in a themed set. Miners collecting a complete set get a mystery gift. Miners achieve a degree if they collect a simple majority of NFTs in a set (e.g., 3 out of 5 NFTs). There are a maximum of 5 degrees that can be granted.

(e) To achieve a degree or receive a mystery gift, miners must simultaneously hold the required amount of NFTs. Degrees are for life, and once achieved, miners can then resell NFTs they used to obtain a degree or receive a mystery gift without losing the degree. They cannot collect the same NFTs to achieve another degree or receive another mystery gift.

(f) Miners can send NFTs off-ecosystem (those NFTs are burned on LNFTxHABN blockchain and reissued on a Loot Arena supported public blockchain. This means that the number of NFTs in a set can reduce over time.

(g) To get a degree, miners must collect:

3 out of 5 NFTs in a set
3 out of 4 NFTs in a set
2 out of 3 NFTs in a set

(h) To get a mystery gift, miners collect:

5 out of 5 NFTs in a set
4 out of 4 NFTs in a set
3 out of 3 NFTs in a set
2 out of 2 NFTs in a set

(i) Degrees benefits

1st degree: 20% additional weightage to the amount of BUN bid at auctions for Oven rewards. E.g., if a miner bids 10 BUN, that miner will be deemed to have bid 11 BUN (10% additional). As Oven

The ground rules

rewards are based on each miners' share of bids at auction to other miners, 1st-degree holders get more BUN than they would otherwise have.

In addition, a first degree moves miners down one mining ratio. E.g., if a miner is on a 42 for 1 ratio, achieving a degree moves that miner down to the next band of 34 for 1 ratio. If a miner is at the lowest ratio of 13 for 1, obtaining a degree does not affect the mining ratio (since that miner is already at the lowest mining ratio).

2nd degree: 40% additional, move two mining ratios down.

3rd degree: 80% additional, move three mining ratios down.

4th degree: 140% additional, move four mining ratios down.

5th degree: 220% additional, move five mining ratios down.

(j) If an NFT set has only 2 remaining NFTs (if 3 out of 5 NFTS were burned, [i.e., sent off-platform]), both NFTs are called the "*Fortunate Twins*" as they can be used to get a mystery gift (complete a full set). However, they cannot be used to get a degree (since a simple majority is needed for a degree).

(k) Miners holding an NFT in a set where 4 NFTs were burned, in other words, the last NFT on Loot Arena in that set, that NFT is called "*The Fallen*" as it cannot be used to get a degree nor a mystery gift.

(l) If a miner needs one NFT to complete a full set (e.g., holding 4 out of 5), the last remaining NFT in that set is called the "*Sucker Punch*" as it could have less value to all miners except the miner that needs it, thus being harder to resell in a battle bidding setting.

Over time, older NFTs may go off-ecosystem and make room for attention to fresh new creators.
